                                                                                                                                 ABK87174
                                                                                     용
                                                                                                                                                             The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, and other immune disorders. The present sequence encodes a 574 protein, which is used to produce ScFv of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.

```
The present invention relates to the isolation of canine and feline concoocal leucine-rich glycoproteins known as 574, and the concoocal leucine-rich glycoproteins known as 574, and the polymucleotide sequences encoding them. The 574 proteins are expressed in golymucleotide sequences of the invention are useful in a pharmaceutical composition for the prevention and/or treatment of tumours or other diseases associated with cell compositions may also broliferation, infections, and inflammacory conditions in animals, preferably dogs or cats. The compositions may also be used for cancer immunotherapy in these animals. The sequences of the invention may also be used in diagnostic kits for rapid, reliable, sensitive, and specific measurement and localisation of 574 in extracted plasma, urine, tissues, and in cell culture media. Antibodies specific for the 574 protein are useful for isolating foetal cells from maternal blood. The solucion process may form part of a diagnostic method e.g. the foetal cells may then be subject to biochemical or genetic sampling used for testing foetal abnormalities, or to determine the sex of the foetus(es).

The present sequence encodes canine 574 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1263 BP; 200 A; 469 C; 377 G; 217 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length:

are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (ii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (vii) for neutralizing the carcinoma; and (xi) for determining carcinoma associated (CA) gene copy number in addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586Al, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 295096 BP; 75726 A; 62659 C; 64620 G; 85924 T; 0 U; 6167 Other;

The invention relates to human tumour-associated antigenic target (TAT)

polypeptides, and their related nucleic acids. The TAT polypeptides are

overexpressed in cancer tissues compared to normal tissues, and may thus

serve as effective targets for the diagnosis and treatment of cancer in

mammals. The invention also relates to nucleic acid and polypeptide

sequences at least 80% identical to the TAT nucleic acids and

polypeptides; expression vectors and host cells comprising a TAT nucleic

acid; an antibody specific for a TAT polypeptide; usion proteins comprising a

CMT polypeptide; and methods and compositions for the treatment or

diagnosis of cancer in mammals. TAT polypeptides, uncleic acids,

antibodies, antagonists, binding molecules and compositions are useful

for diagnosing or treating a cell proliferative disorder associated with

colorectal cancer, lung cancer, liver cancer, bandear

cancer, pancreatic cancer, cervical cancer, cancers of the central

concer, pancreatic cancer, cervical cancer, cancers of the central

concer, pancreatic ancer, cervical cancer, cancers of the central

The invention relates to a cancer cell-specific apoptosis inducing agent comprising, as an active ingredient, a compound which inhibits stabilization of a chromosome, or a compound which suppresses the expression of a gene chosen from APE2, ATR, BRCA1, Chk1, Cdc5, Cdc6, Cdc7, Cdc45, Cdt1, C3A, CSB, Ctf18, DDB1, DDB2, DNA2, DUT, Elg1, Endov, Cdc7, Cdc45, Cdt1, C3A, CSB, Ctf18, DDB1, DDB2, DNA2, DUT, Elg1, Endov, Ligase1, Mad2, MBH1, FBH1, ERN1, Geminin, Hus1, KNTC2, NNC80, MCMT, Cdc6, Ligase1, Mad2, MBH2, PMC3, MCM3, MCM5, MCM5, MCM6, MCM7, MCM8, MCM10, MCM7, Cdc6, Cdc6,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cancer cell-specific apoptosis inducing agent useful as anticancer agent, comprises as active ingredient, compound that inhibits stabilization of chromosome or compound that suppresses expression of gene e.g. APE2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                      RNA interference; gene silencing; 88; carcinoma; cytostatic; apoptosis; chromosome stabilization; cancer; DNA damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             purification, chromatin structure maintenance and telomere structure maintenance. The compound, which suppresses the expression of the genes

```

```
is a double-stranded RNA (siRNA, short interfering RNA), antisense oligonuclectide, a variant protein having dominant negative character with respect to protein encoded by the gene, an antibody and a low molecular weight compound which binds to the protein encoded by the gene. The compounds are useful as anticancer agents. (M1) is useful for manufacturing a pharmaceutrical composition comprising the compound. The compound is useful for elucidating the mechanism of inducing cancer cell specific apoptosis and is highly cancer cell specific, has few or no side effects as an anticancer agent and damage produced in chromosomal DNA is repaired. The present sequence is a CDNA representing a gene target for the compounds of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a new microarray which comprises probes for genes involved in psychoneuroendocrinimmune (PMT) activity. The microarray is useful in diagnosing a condition associated with PMI activity, such as CPS, type-2 diabetes, allergic condition, inflammation, cancer and infection. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New microarray comprising probes for genes involved in psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a condition associated with PNI activity, e.g., inflammatory or infectious

The invention relates to a cancer cell-specific apoptosis inducing agent comprising, as an active ingredient, a compound which inhibits stabilization of a chromosome, or a compound which inhibits catabilization of a chromosome, or a compound which suppresses the expression of a gene chosen from ARE2, ART, BRCA1, Chk1, Cdc5, Cdc6, Cdc7, Cdc45, Cdt1, CSA, CSB, Ctf18, DDB1, DDB2, DNA2, DUT, Elg1, EndoV, EB91, ERM1, FRBN, Geminin, Hus1, KNTC2 (NDE80), KNB0, Ligasel, Mad2, MBD4, MGm3, MGm4, MGm5, MGm6, MGm7, MGm8, MGm10, MGMT, MLH3, Mms4, MPG, MSH2, Mus2, PKN, NEIL2, NEIL2, NFH1, Orc1, Orc3, PRM19, PCNA, Pifl, PmS1, PMS1, PMS2, PKN, Polap180, Pola Pp10, Pola Spp1 (Primza), Polb, Pold pl25, Pole Dpb3, Pole Dpb4, Pole Pol2, Pol1, Pol1, CC Rad54, Rad51, Rad1, Rad18, Rad23A, Rad23B, Rad51, Rad51D, TMBLESS, Tin2, Topoisomerase I, Topoisomerase IIIa, Topoisomerase IIIa, Topoisomerase IIIb, Ubc13, UNG, XAB2, XPC, XPF, XPG, Xrc2 and XRCC4. Also included are an anticancer agent comprising (I) as an active ingredient, screening (M1) apharmaceutical composition (involving screening the compound which a carrier? III, the compound which is the compound which a carrier? III, the compound which a carrier?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cancer cell-specific apoptosis inducing agent useful as anticancer agent, comprises as active ingredient, compound that inhibits stabilization of chromosome or compound that suppresses expression of gene e.g. APE2, BRCA1, Cdc7, NEIL2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RNA interference, gene silencing; ss; carcinoma; cytostatic; apoptosis; chromosome stabilization; cancer; DNA damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and mixing the compound with a carrier). In (1), the compound which inhibits the stabilization of a chromosome, is an agent capable of inhibiting a human chromosome instability disease related gene,

purification, chromatin structure maintenance and telomere structure maintenance. The compound, which suppresses the expression of the genes is a double-stranded RNA (siRNA, short interfering RNA), antisense oil gonucleotide, a variant protein having dominant negative character with respect to protein encoded by the gene, an antibody and a low molecular weight compound which binds to the protein encoded by the gene. The compounds are useful as anticancer agents. (MI) is useful for manufacturing a pharmaceutical composition comprising the compound. The compound is useful for elucidating the mechanism of inducing cancer cell specific approasis and is highly cancer cell specific, has few or no side effects as an anticancer agent and damage produced in chromosomal DNA is repaired. The present sequence is a CDNA representing a gene target for
                        damage check point, sister chromatid aggregation or isolation, base excision repair, mismatch excision repair, mucleotide excision repair, homologous-recombination restoration, non-homologous terminal binding restoration, double-stranded MN-cleavage repair, DNA post replication repair (DNA damage tolerance), DNA crosslinking damage repair, DNA protein crosslinking damage repair, DNA protein crosslinking damage repair, DNA

If a sequence meets the criteria of the above statement, it needs no comments or tags. If the criteria are not met, such as ambiguous bases, then the region is duly annotated.
                                                                                                   MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
                                                                                                                                                                                                                                                                                           The BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male GSPBL/6J mouse spleen and/or brain genomic DNA. The Clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemietry, or covered by high quality data (i.e. phred quality as 230); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence. The sasembly was confirmed by restriction digest.

This finishing standard has slightly changed from the previous Human standard. Specifically, standards for regions of low sequence complexity (such as dinucleotide repeats and small unit tandem repeats) have been relaxed. These regions are very prevalent in the mouse genome, and the return on extended finishing efforts is

On Nov 19, 2002 this sequence version replaced gi:23265004.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.imc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (19-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 10, 2003 this sequence version replaced gi:24942631.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.uc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (28-OCT-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houeton, TX 77030, USA 3 (Dasse 1 to 236951) Rat Genome Sequencing Consortium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Web site: http://www.hgsc.bcm.tmc.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center: Baylor College of Medicine

Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA on Nov 19, 2002 this sequence version replaced gi:23907923.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.imc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as tuns of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

Center project Information
Center project name: GZFE
Center clone name: CH230-231L11
Center clone name: CH230-231L11
Center clone program: Phrap; version 0.990329
Assembly program: Phrap; version 0.990329
Consensus quality: 237334 bases at least Q40
Consensus quality: 240866 bases at least Q30
Consensus quality: 240866 bases at least Q20
Estimated insert size: 244791; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. .244451

That. The TAN 1914 is a glycoprotein which is widely expressed in carcinomas but has a highly restricted expression pattern in normal adult tissues. It appears to be strongly correlated to metastrasis in colorectal and gastric cancer. 574 antigen may therefore be useful in tumour diagnosis, targeting and immunotherapy. Mice in which tumours had been inculated with a virus expression vector containing the present sequence. The 574 antigen was shown to be effective at eliciting an immunotherapeutic anti-tumour response. Both the nucleic acid encoding the antigen and the antigen itself can be used to elicit an immune response, preferably CTL or an antibody response in a subject. The present sequence appears in GenBank at accession number AJ012160
                                                                                                          Tumor associated antigen, 5T4 capable of eliciting cytotoxic T-lymphocyte response useful in vaccinating against and in treating tumors.
                                                                                                                                                                                                                                 The present sequence encodes the mouse 5T4 tumour-associated antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1281 BP; 246 A; 410 C; 354 G; 271 T; 0 U; 0 Other;

Human cDNA encoding protein that promotes STAT6 activation #62.

Ž (ASAH ) ASAHI KASEI

16-MAY-2003

```
The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant or promote STAT6 activation. A transformant composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as allergic diseases, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, infections disease associated with STAT6 activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid arthritis, osteoarthritis, systemic lupus erythematosums, septem.

C Thi hyperactive diseases. Compositions are also useful in rheumatoid arthritis, ischemmic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STAT6 activation or inhibition of STAT6. The present sequence represents a compounds for treating and preventing hyperactively useful for screening compounds for treating and preventing hyperactively useful for screening compounds for treating and preventing hyperactively activation or inhibition of STAT6. The present sequence represents a human cDNA encoding a protein which promotes STAT6 activation.
                                                                                             Ltransducer and activator of transcription 6 activation purified protein, for diagnosing and treating disease with activation/inhibition of transcription factor e.g.

compounds which inhibit or programmer and an antigen. The nucleic acid is useful for expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STATE activation. A transformant expressing the protein is useful for screening compounds which inhibit or promote STATE activation. A transformant expressing the protein is useful for producing a pharmaceutical composition. Compositions antibodies and antisense molecules are useful for the treating a disease associated with STATE activation such as allergic disease, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, infections disease and cancers. Compositions are useful creating disease associated with STATE activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid arrhitis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, allergic rhinitis, is chaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AlDS. The protein has efficient promoting STATE activity. The protein or nucleic acid is effectively useful for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    compounds for treating and preventing disease associated with excessive activation or inhibition of STAT6. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                            New signal transducer and activator of transcription 6 activation promoting purified protein, for diagnosing and treating disease associated with activation/inhibition of transcription factor e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            activation or inhibition of STAT6. The present sequence repurer
human cDNA encoding a protein which promotes STAT6 activation.
                                                                                                                                                                                                                                                                                                      Ishizawa K;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2557 BP; 512 A; 730 C; 696 G; 619 T; 0 U; 0 Other;

Nucleotide sequence of canine 5T4 protein.

```
which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The Scr antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The Scr antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, gastrointestinal disorders, infections, diabetes, Helicobacter

The present invention relates to the isolation of canine and feline oncofoetal leucine-rich glycoproteins known as 574, and the proposition of polynucleotide sequences encoding them. The 574 proteins are expressed in a significant proportion of tumours. The sequences of the invention are useful in a pharmaceutical composition for the prevention and/or treatment of tumours or other diseases associated with cell proliferation, infections, and inflammatory conditions in animals, preferably dogs or cats. The compositions may also be used in disquestic kits for rapid, reliable, sensitive, and specific measurement and localisation of 574 in extracts of plasma, urine, tissues, and in cell culture media. Antibodies specific for the 574 protein are useful for isolating feetal cells from maternal blood. The isolation process may form part of a diagnostic method e.g. the foetal cells may then be subject to biochemical or genetic sampling used for testing foetal abnormalities, or to determine the sex of the foetus(es).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel canine or feline 5T4 polypeptide and polynucleotides encoding the polypeptide, useful in preparation of vaccine for treating and/or preventing cancer in a subject, preferably a dog or cat.

Determining open reading frames of genome of an organism e.g. a human suffering from cancer involves use of single oligonucleotide primer at low stringency for preparing single-stranded cDNA from mRNA of ndividual

Example 9; Page 302; 959pp; English.

The invention describes a method of determining open reading frames in the genome of organism, comprising contacting mRNA from cell of organism with a single oligonucleotide primer; (1) at low stringency, preparing wingle aligonucleotide primer; (1) at low stringency, preparing wingle astranded cDNA by reverse transcribing mRNA with (1), amplifying contacting, preparing contolled modernee from a genome of an organism corresponds to a nucleotide sequence of an open reading frame; for preparing a contig, nucleotide sequence of an organism. mRNA is obtained from mammalian controll which is associated with a pathological condition e.g. a nucleotide sequence of an organism. mRNA is obtained from mammalian controll which is associated with a pathological condition e.g. a colon cancer or breast cancer cell. The method is useful for analyses of copulations of subjects and can be used to carry our genetic analyses of parge or small populations. further, it can be used to study living systems to determine if, e.g. there have been genetic shifts which render an individual or population more or less likely to be afflicted with an individual or population more or less likely to be afflicted with an individual or population more or less likely to be passed to offspring the study of whether the conditions are likely to be passed to offspring through over or sperm. The method can also be used in the study of whether the conditions are likely to be passed to offspring through over or sperm. The malyses for pathological conditions can be studied in this way compared to determine if the pathogens which integrate into the genome, such as critical out in all animals, plants of present, deferent approaches to critical parameter of determination of the pathogens which integrate into the genomes wifice or mutations, which may require different approaches to critypanosomes different types of Plasmodium, et

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain caction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consists of (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a clypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in cappersity responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this
                                                                                                                                                                                                                                                                                                                                          Human, chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.

The invention describes a method comprising comparing an expression profile of at least one gene in a peripheral blood sample of a patient to at least one gene in a peripheral blood sample of a patient to the patient has a solid tumour, and each of the gene is differentially expressed in peripheral blood mononuclear cells (PBMCs) of a first class of patients as compared to PBMCs of a second class of patients, where both the first and second classes of patients have the solid tumour, and each of the first and second classes is a subcluster formed by an unsupervised clustering analysis of gene expression profiles in PBMCs of a population of patients who have the solid tumour, and where the majority of the first class of patients has a first clinical outcome, the majority of the second class of patients has a second clinical outcome. Also described are: a system comprising (i) a memory or a cutome. Also described are: a system comprising (i) a memory or a storage medium including date that represent an expression profile of at least one gene in a peripheral blood sample of a patient who has a solid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A method, useful for prognosing and treating solid tumor, comprises comparing an expression profile of a gene expressed in peripheral blood mononuclear cells to a reference expression profile of a gene.
patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

tumour, (ii) at least another storage medium including data that tegresent at least one reference expression profile of the gene, (iii) a program capable of comparing the expression profile to the reference expression profile, and (iv) a processor capable of executing the expression profile, and (iv) a processor capable of executing the comprision profile of patients who have the solid tumour correlate with clinical outcomes of the patients who have the solid tumour prognosis genes, where each of the solid tumour prognosis genes, where each of the solid tumour prognosis genes, where each of the solid tumour prognosis genes, where poth the first and second classes of patients as compared to PBMCs of a second class of patients as compared to PBMCs of a second class of patients has a second class of patients has a first clinical outcome. And the second class of patients has a second clinical outcome. The method, system, and array are useful for prognosing and treating solid tumours. This sequence represents a solid tumours prognosis gene of the invention. Note: The sequence acts for this patent did not form part of the program part of the program of the patients of the patients has a second class of the patients a solid tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting a breast cancer-associated transcript in a patient's cell, useful for diagnosing breast cancer, comprises contacting a biological sample with a polynucleotide that selectively hybridizes with breast

The invention comprises a method of detecting a breast cancer-associated transcript in a cell from a patient. The method of the invention involves contacting a biological sample from the patient with a nucleotide that hybridises to one of the 69 breast cancer-associated gene sequences shown in the specification. The method of the invention is useful in the diagnosis or prognosis of breast cancer calls. Genes identified by the cargon of the invention can be used in diagnostic purposes and also as the argent of the invention can be used in diagnostic purposes and also as cargets for screening for therapeutic compounds that modulate breast cancer (e.g. hormones or antibodies). Identification of genes that are over or under expressed in breast cancer can additionally provide high-resolution, high-sensitivity datasets which can be used in the areas of diagnostics, therapeutics, drug development, pharmacogenetics, protein structure and biosensor development. DNA sequences ABT0763 - ABT07761 represent the 69 breast cancer-associated gene sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lung cancer-associated polynucleotide, gene, ds, cytostatic, emphysema, antiinflammatory; antiasthmatic; non-small cell lung cancer; atelectasis, small cell lung cancer; benign lesion; precancerous lesion; bronchitis; chronic obstructive pulmonary disease; hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma; bronchiectasis.

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersenativity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polynucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences ABX76124-ABX76474 represent lung cancer-associated polynucleotides of the

Detecting an ovarian cancer-associated transcript in a cell from a patient, comprises contacting a biological sample from the patient with a polynucleotide that hybridizes to an ovarian cancer gene.

Claim 10; Page 297; 332pp; English.

The invention relates to a method of detecting an ovarian cancerassociated transcript in a cell from a patient, by contacting a biological sample from the patient with a polymucleotide that selectively hybridizes to a sequence at least 80% identical to any of one of 80 mucleic acid sequences given in the specification. The method is useful in diagnosing ovarian cancer and in identifying and using agents and/or targets that inhibit ovarian cancer. The nucleic acid molecule, polypeptide and the antibody may also be used in detecting ovarian cancers, monitoring and early detection of relapse following treatment, monitoring response to therapy, selecting patients for post-operative chemotherapy or radiation therapy, in selecting mode of therapy, determining tumour prognosis, early detection of pre-cancerous lesions, and as vaccines. This sequence corresponds to one of the nucleic acids used for the detection method of the invention.

The invention relates to a method of identifying a candidate p53 pathway modulating agent. The method involves contacting an assay system comportsing a purified Leucine rich repeat, capridous related (LRRCAPS) polypeptide or nucleic acid or its fragment with a test agent and detecting a test agent-biased activity, where a difference between the test agent-biased activity and the reference activity identifies the test agent as a candidate p53 pathway modulating agent. The method is useful for identifying a candidate p53 pathway-modulating agent for preparing a composition for diagnosing or treating cancer. The invention is useful in gene therapy. The present sequence is human LRRCAPS related DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; anti-HIV; cytostatic; antidiabetic; antiasthmatic; cachexia; AIDS; antiinflammatory; cardiant; haemostatic; neuroprotective; anorectic; noctropic; immunosuppressive; osteopathic; antiparkinsonian; cancer; antiinfertility; cerebroprotective; gene therapy; NOVX; NOV; fertility;

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or diagnosing disease, anorexia, cancer-associated cachexia, cancer, neurodegenerative disease, Alzheimer's disease, Parkinson's disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disorders associated with obesity, metabolic syndrome X or wasting disorders associated with obesity, metabolic syndrome X or wasting disorders associated with chronic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in
                                                                                                                                                      Rastelli L, Mezes PD, Smithson G, Guo X, Gerlach V, Casman SJ; Boldog FL, Li L, Zerhusen BD, Tchernev VT, Gangolli EA, Vernet CAM; Pena CEA, Burgess CE, Liu X, Spytek KA, Gorman L, Spaderna SK; Voss EZ, Malyankar UM, Anderson DW, Patturajan M, Miller CE; Taupier RJ, Padigaru M, Shenoy SG, Kekuda R, Gusev VY, Pochart PF;
                                                                                                                                                                                                                                                                                                                                                      New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Feline, cat, oncofoetal leucine-rich glycoprotein; 5T4; tumour; cell proliferative disorder; infection; inflammatory condition;

The present invention relates to the isolation of canine and feline oncofoetal leucine-rich glycoproteins known as 574, and the concofoetal leucine-rich glycoproteins known as 574, and the polynucleotide sequences encoding them. The 574 proteins are expressed in a significant proportion of tumours. The sequences of the invention are useful in a pharmaceutical composition for the prevention and/or treatment of tumours or other diseases associated with cell conforming in animals, proliferation, infections, and inflammatory conditions in animals, preferably dogs or cats. The compositions may also be used for cancer immunotherapy in these animals. The sequences of the invention may also be used in disgnostic kits for rapid, reliable, sensitive, and specific measurement and localisation of 574 in extracts of plasma, urine, issues, and in cell culture media. Antibodies specific for the 574 protein are useful for isolating foetal cells from maternal blood. The protein are useful for isolating foetal cells from maternal blood. The cells may then be subject to biochemical or genetic sampling used for testing foetal abnormalities, or to determine the sex of the foetus(es). The present sequence encodes feline 574 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel canine or feline 5T4 polypeptide and polynucleotides encoding the polypeptide, useful in preparation of vaccine for treating and/or preventing cancer in a subject, preferably a dog or cat.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e. phred quality >=30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence. The assembly was confirmed by restriction digest.

This finishing standard has slightly changed from the previous Human standard. Specifically, standards for regions of low sequence complexity (such as dinuclectide repeats and small unit tandem repeats) have been relaxed. These regions are very prevalent in the mouse genome, and the return on extended finishing efforts is

Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23265004.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Worley,K.C.

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* the accession number will be preserved.

The sequence in this assembly is a combination of BAC based reads and whole genome shortgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contigs scaffold'). Within each contig scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission

* Consists of 4 contigs. The true order of the pieces

* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PAT 08-JUN-2001
                                                                                                                                                                                                                                                                                                            Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
                                                                                                                                     as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            711 234710: contig of 234710 bp in length
711 234810: gap of unknown length
9812 235924: contig of 1114 bp in length
9825 236024: gap of unknown length
9825 237414: gap of unknown length
9815 237414: gap of unknown length
9815 239765: contig of 1290 bp in length
9815 239076: contig of 1662 bp in length.
9826 2502110/Qualifiers

The invention describes a method of determining open reading frames in the genome of organism, comprising contacting mRNA from cell of organism comprising contacting mRNA from cell of organism comprising contacting mRNA with (1), amplifying single-stranded cDNA by reverse transcribing mRNA with (1), amplifying single-stranded cDNA by reverse transcribing mRNA with (1), amplifying cDNA, sequencing the product, and repeating the contacting, preparing and amplifying steps with different primers and sequencing resulting nucleotide sequence from a genome of an organism corresponds to a nucleotide sequence of an open reading frame; for preparing a contig, nucleotide sequence of an open reading frame; for preparing a contig, all or part of a genome of an organism; and for sequencing all or nucleotide sequence of an open reading frame; for preparing a contig, all or part of a genome of an organism; and for sequencing colon cancer or breast cancer cell. The method is useful for analyses of or human cell which is associated with a pathological condition e.g. a colon cancer or breast cancer cell. The method is useful for analyses of populations further, it can be useful for analyses of systems to determine if, e.g. there have been genetic shifts which render of systems to determine if, e.g. there have been genetic analyses of congenital diseases, and the risk of affliction to a foctus, as well as the study of whether the conditions are likely to be passed to offspring through ove or sperm. The method can also be used in the study of whether the conditions are likely to be passed to offspring through ove or sperm. The analyses for pathological conditions can be congenitated out in all animals, birds, fish, etc. Using this method, in the area of agriculture, for example the genomes of food crops can be genomes can also be studied in this way. Similarly, the method permits and the area of the pathogens which may require which may require with the area. The method is a similar to a such a such a such a contaction of the patho
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 therapy. This method is also applied to eukaryotic pathogens, such as trypanosomes, different types of Plasmodium, etc. The method essentially eliminates sequencing of non-coding portions. This sequence represents a polymucleotide isolated from human colon cancer cell cDNA library
                                                                                                                                                                                                                              Determining open reading frames of genome of an organism e.g. a human suffering from cancer involves use of single oligonucleotide primer at low stringency for preparing single-stranded cDNA from mRNA of

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in displandable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cannot acid sequences AAS644504 represent novel human diagnostic cativity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

The invention comprises a method of detecting a breast cancer-associated transcript in a cell from a patient. The method of the invention involves contacting a biological sample from the patient with a nucleotide that hybridises to one of the 69 breast cancer-associated gene sequences shown in the specification. The method of the invention is useful in the diagnosis of breast cancer, and for detecting genes that are up or down-regulated in breast cancer cells. Genes identified by the method of the invention can be used in diagnostic purposes and also as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    structure and biosensor development. DNA sequences ABT07693 - ABT07761 represent the 69 breast cancer-associated gene sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 targets for screening for therapeutic compounds that modulate breast cancer (e.g. hormones or antibodies). Identification of genes that are over or under expressed in breast cancer can additionally provide high-resolution, high-sensitivity datasets windic can be used in the areas of diagnostics, therapeutics, dary development, pharmacogenetics, protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting a breast cancer-associated transcript in a patient's cell, useful for diagnosing breast cancer, comprises contacting a biological sample with a polynucleotide that selectively hybridizes with breast cancer nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ; ds; breast cancer; breast cancer-associated gene sequence; development; pharmacogenetics; biosensor development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 927 BP; 187 A; 297 C; 240 G; 203 T; 0 U; 0 Other;
